LAUNDRY BRIGHTENER

ALL PURPOSE SOLUTION

Pyxis Laundry Brightener is a powerful liquid laundry non-chlorine bleach that is safe for all colors and fabric types. In solution, it oxidizes to help remove soil and organic matter, brightens the fabric and removes stains leaving only water and oxygen as a by-product. Pyxis Laundry Brightener may be added during the detergent cycle. It is designed for use on all cotton, synthetic and blended fabric types. Some chlorine bleaches (hypochlorite solutions) effect tensile strength of cottons and will form insoluble complexes in the presence of metals such as iron (contained in the water), leaving stains in the fabric. Pyxis Laundry Brightener is not affected by metal traces and is safe on all fabrics.

DIRECTIONS FOR USE

Pyxis Laundry Brightener may be used for on-premise, institutional or top loading home-style machines. Use four to five ounces per 50 pounds of linen in an on-premise type machine. Use one to two ounces for a home style machine. Hot water solutions provide the best results. This product is safe to use with enzyme detergents and presoaks. Do not combine with hypochlorite type bleaches. Dilution requirements may vary with soil, water and machine conditions. Consult your Account Manager for specific instructions. Test colorfastness of fabric by applying to an inconspicuous area of the fabric. If color bleeds, wash separately without bleach or destainer.

PRE-SPRAY

Dilute one part Pyxis Laundry Brightener to one part water. Spray directly on the area of the fabric to be treated. Tough stains may require stronger concentrations.

PRE-SOAK

Use one ounce of Pyxis Laundry Brightener per gallon of warm water. White and pastel articles should be soaked separately from dark colored items. Soak for 30 to 60 minutes prior to washing in a machine for a normal cycle.

See your Account Manager for specific handling instructions.

Please review label and SDS on stateindustrial.com for all product directions, precautions, and first aid information.

TECHNICAL DATA

APPEARANCE: clear, colorless liquid

ODOR: pungent

SPECIFIC GRAVITY: 1.03

pH: 1.0 – 2.0 (concentrate)
